Introduction	9
Audubon Center for Research of Endangered Species (ACRES), Westbank, 1996	16
Bamboo Apothecary, Uptown, 2005	18
Carrollton Branch, Whitney National Bank, Carrollton, 2004	20
Causeway Animal Hospital (Now VCA Causeway Animal Hospital), Metairie, 1998	22
Crescent City Veterinary Hospital, Uptown, 2005	24
Lakeside Camera Photoworks, Metairie, 2006	26
LA/SPCA Animal Rescue and Care Center, Algiers, 2007	28
New Orleans Convention and Visitors Bureau Building, Lower Garden District, 2003	30
Octavia Books, Uptown, 2000	32
Port of New Orleans Office Building, Riverfront, 1996	34
Rebuild Center at St. Joseph Church, Mid-City, 2007	36
Regional Transportation Management Center, Lakeview, 2009	38
St. Bernard Parish Fire Station No. 2, Arabi, 2009	40
St. Bernard Parish Fire Station No. 6, Meraux, 2010	42
Swan River Yoga Studio, Mid-City, 2010	44
Tchoupitoulas Studios, Warehouse District, 2006	46
W New Orleans Hotel, CBD, 2000	48
Whole Foods Market at Arabella Station, Uptown, 2002	50

## SCHOOLS + UNIVERSITY FACILITIES

---

Andrew H. Wilson Charter School, Broadmoor, 2010	54
Dillard University International Center for Economic Freedom (DUICEF), Gentilly, 2004	56
Dillard University Professional Schools Building, Gentilly, 2010	58
Goldring/Woldenberg Hall II, Tulane University, Uptown, 2000	60
Israel Environmental Sciences Building, Tulane University, Uptown, 2000	62
John P. Isché Library Commons, LSUHSC, Mid-City, 2009	64
Lavin-Bernick Center for University Life at Tulane University, Uptown, 2006	66
L. B. Landry High School, Algiers, 2010	68
Les Enfants, Trinity Episcopal School, Lower Garden District, 2004	70
The Lower School Expansion, Isadore Newman School, Uptown, 2003	72
The Mayer Residences at Tulane University, Uptown, 1997	74
McWilliams Hall, Newcomb College Campus at Tulane University, Uptown, 1996	76
Meyer Science and Mathematics Building, Brother Martin High School, Gentilly, 2007	78
The New Orleans Center for Creative Arts (NOCCA), Marigny, 1999	80
Norman C. Francis Science Academic Complex, Xavier University, Mid-City, 1998	82
Recreation and Fitness Center, University of New Orleans, Lakefront, 2002	84
Ridgley Fine Arts and Athletic Center, Brother Martin High School, Gentilly, 1998	86
Siena Center, St. Mary's Dominican High School, Broadmoor, 2006	88
Training, Resource, and Assistive-Technology Center, University of New Orleans, Lakefront, 1996	90
Wall Residential College at Tulane University, Uptown, 2005	92
The West Garage at Loyola University, Uptown, 1996	94
Willow Dormitory at Tulane University, Uptown, 1999	96

## INSTITUTIONS

---

A. L. Davis Jr. Multi-Purpose Building, New Zion Baptist Church, Central City, 1999	100
Besthoff Sculpture Garden, New Orleans Museum of Art, City Park, 2003	102
Children's Hospital Research and Education Building, Uptown, 2001	104
First Baptist Church, Navarre, 2004	106
Kate & Laurance Eustis Chapel, Ochsner Clinic Foundation, Metairie, 2001	108
Louis J. Roussel, Jr. Pavilion and Critical Care Tower, Ochsner Foundation Hospital, Jefferson Highway, 2000	110
The National World War II Museum Phase IV, Warehouse District, 2009	112
The New Orleans Arena, CBD, 1999	114
New Orleans Ernest N. Morial Convention Center Phase III, Riverfront, 1998	116
Ochsner Medical Center for Children, Metairie, 2005	118
Ogden Museum of Southern Art, Warehouse District, 2002	120
St. Martha Catholic Church, Harvey, 2003	122
Zephyr Field, Metairie, 1997	124

## RESIDENTIAL BUILDINGS

---

Adams/Morse House and Studio, Carrollton, 1998	128
Albright House, Lakeside, 2004	130
Casa Tchoupitoulas, Uptown, 2005	132
The Cotton Mill, Warehouse District, 1997	134
Crutcher Residence, Uptown, 2008	136
Fifield House and Studio, Marigny, 2007	138
Garden House, Poydras Home, Uptown, 2001	140
Garden Structure—Carport, Bywater, 1996	142
Gelfand Penthouse, CBD, 1997	144
Global Green House, Holy Cross, 2008	146
GREENbuild House, Central City, 2007	148
Hart House Addition, Uptown, 2005	150
Keiffer House I, Uptown, 1999	152
Keiffer House II, Uptown, 2002	154
The Marquis Apartments, Mid-City, 2009	156
Mayne House, Lakeview, 2008	158
930 Poydras Street, CBD, 2009	160
Rutledge + Maselli Residences, Uptown, 2008	162
St. Ann Street House, City Park, 2003	164
St. Elizabeth Condominiums, Uptown, 2005	166
St. Joseph Condominiums, CBD, 2003	168
Stickney House, Uptown, 1996	170

Index	183

## INTRODUCTION

---

One of the world's best kept secrets is that New Orleans has contemporary architecture. The world knows a lot about New Orleans...

...about early jazz and current New Orleans music. It knows about street parades and Carnival. It knows about traditional and contemporary New Orleans cuisine. It knows about French Quarter and Garden District architecture from the city's rich history. It knows about the broken levees and the horrors of Katrina. But it knows nothing about the fine recent buildings here.

Ironically, sixty years ago New Orleans was receiving national and even international attention for its then contemporary Modernist design. The award-winning New Orleans Public Library by Curtis and Davis received the highest acclaim in national architecture publications. The Civic Center complex was lauded for its progressive design. And the ground-breaking Modernist schools of the city, particularly Charles Colbert's masterwork, the Wheatley Elementary School, received international attention. Eventually, another highly regarded work, Buster Curtis's Superdome of the early 1970s, closed the era of strong Modernist design.

As in much of the country in that decade, architecture languished in New Orleans. Then in the 1980s a new

idea emerged that some thought was a more appropriate way to design buildings that were more sympathetic to the past. Its first manifestation here, which was noted worldwide, was the Piazza d'Italia of Charles Moore and collaborators. Endlessly photographed, discussed, and visited, it was truly larger than life; but, it was not embraced by locals as anything more than an eccentric folly, which was actually the intent of the designers! However, the idea that new buildings using traditional forms could, "wittily" in Moore's words or "ironically" in the words of architect Robert Venturi, comment on the past while embracing the future hit New Orleans particularly hard and continues to affect design in the city even today. The most egregious manifestation of this viewpoint was the destruction of Curtis and Davis's world class 1968 Rivergate Convention Center to build the retro Harrah's Casino in 1994.

Although it seems to be a responsible position, there are fundamental problems with a historicist approach to design. The first is that building technologies have changed radically in the 150 years since many of this city's significant structures were erected. This change

affects not only the structure but, of necessity, the appearance of a building, unless outmoded building practices or trickery are employed. For example, one can now design an entire exterior wall of glass, while in the early nineteenth century glass was commonly available only in sizes less than one square foot. Second, in spite of the simplicity of the concept, like nuclear power, successful design in a historicist manner is extraordinarily difficult to effectively realize. It requires a comprehensive understanding of architectural history in order to employ an architectural vocabulary from the past in a convincing manner that will stand up to the scrutiny of the twenty-first century. Thus, there is the dilemma of the Vieux Carré, in which new buildings

must be virtually indistinguishable from their ancient neighbors, creating confusion for everyone regarding what is truly old. This is the most important objection to historicist or postmodern design: that it devalues the truly historic by interspersing structures that are actually new but appear to be old.

Is it not more vital for buildings in a city to take on characteristics of their time? Of the buildings presented here, some have programs of use quite different from those of the past. All of them must deal with the challenges of extreme environmental conditions, and all have the opportunities of employing current building technologies. And yet, a form too alien can be simply self-referential, not participating in the rich dialogue that particularly characterizes New Orleans. This look-at-me attitude is the problem with the famed “Make it Right” houses and the reason they are disappointing, despite their extraordinary notoriety. The thesis behind the project selection is that new work must stand up and stand out to the extent that is appropriate to the rich urban mix of the city.

To produce an outstanding work of architecture, the resources and expertise required are enormous, and the works showcased here represent eighty of the best projects over the previous decade and a half. This time interval was selected because in the last fifteen years architecture in New Orleans has awakened from the postmodern doldrums, and architects have taken on a renewed commitment to excellence. New Orleans is hardly singular in its high quality recent design. Cities with similar issues of historic/new have been flourishing, including Amsterdam, Montreal, San Francisco, and Philadelphia, among many others. However, our accomplishments are among the least well known.

Gibson Hall Canopy  
John P. Klingman

Architectural design is often based on simple concepts, almost in the realm of common sense. However, that doesn't mean it is easy to do well. Over fifteen years as a member and chairman of the Architectural Review Committee of the New Orleans Historic District Landmarks Commission, I have attempted to assist in integrating new design into historic neighborhoods. Some of the included projects were part of this process. In these building reviews, my task is relatively straightforward: to describe and assess the salient characteristics of each project and the degree to which these are successful.

It could be argued that the following discussions of the projects are more affirmative than critical. This is true, and it arises from two conditions. First, my own nine years of professional practice in Boston taught me how difficult it is to realize a good project in the face of numerous and complex constraints. Second, in teaching architecture in New Orleans since 1983, I

was initially discouraged by the scarcity of exemplary local projects that I could point out to and discuss with students. Now, I am particularly encouraged by the design energy and multiple directions that the included projects demonstrate. These are instructive examples for students, practicing architects, actual and potential clients, and the informed public.

In an intense high school English class, our teacher posited, "a critic is a legless runner." Therefore, to further explain principles underlying the critiques that follow, here are three of my own attempts, as a New Orleans architect, to address the issues I have outlined here. These are small projects; therefore, they are not included within the body of this volume (although one larger project, the Loyola West Garage wall, does appear).

The Gibson Hall canopy was commissioned in 2000 by Tulane's University College to mark its entrance on the side of the university's 1894 main administration building. The new canopy contrasts the heaviness of

Streetcar Terminus Rendering  
Garrett Jacobs

the original Richardsonian Romanesque limestone mass with a light, flaring steel structure. Influences range from the round arches of the original openings, to the typical New Orleans barrel-vaulted fabric awnings, to contemporary vernacular construction and to Hector Guimard's work in Paris that was contemporaneous with the original building. The structure can be recognized as new but in a sympathetic dialogue with its historic host. (Ramiro Diaz assisted on the project)

A current project, for the Regional Transit Authority (RTA), is the design of a shelter for the terminus of the St. Charles Streetcar line at Carrollton and Claiborne avenues. The concept is to create a simple form with some iconic character that complements the historic Perley Thomas streetcars and provides amenity to

passengers as they are waiting at this location. Although the streetcar line is historic, there were no shelters along the line; and replicating historic shelter designs from elsewhere would devalue the uniqueness of the St. Charles line. Therefore, the design evokes the traditional concept of shelter with its pitched roof forms while the triangular shapes provide a dynamic emphasis. (The project was designed through the Tulane City Center of the Tulane University School of Architecture. Garrett Jacobs was the student assistant on the project.)

Another project at Tulane was the Monroe Facade Redesign of 2004-5. Tulane University's tallest dormitory required a curtain wall replacement in 2004. Not all of the city's Midcentury Modernist design was strong, and this building was an example of a banal original

Monroe Hall West Facade  
John P. Klingman

exterior treatment. So the project offered a great opportunity to improve the appearance and explore concepts of sustainable design: increased attention to durability, efficient use of resources, and enhanced attention to issues of health and well-being. Because of the repetitive nature of the facade, it was important to introduce a dynamic emphasis while providing amenity at the scale of the individual room. To accomplish this were two primary concepts: utilizing continuous glass under the existing horizontal sunshade to provide shaded daylight and an opaque panel vertically adjacent to one side of each column. Both of these ideas were important to minimize solar heat gain on the long facades, which are east and west facing. The specified glass is high performance to provide more interior daylight while rejecting heat. A bright silver panel at the lower corner of each room shields a desk and provides a visual accent. An operable awning window is positioned very low on the wall to enable visual contact with human activity on the quad below, which is perhaps important for freshmen leaving home for the first time. The other major design initiative was to reconsider four original balconies, unused and locked, located at lounges in the center of upper floors. Here, the curtain wall was relocated to the outer edge of the former balconies. This captured usable interior space and generated long "bay windows" to enliven the facade. These sport a series of brightly colored panels, perhaps to offset the grey flannel business school building across the quad. (Architect of Record was KDK of New Orleans)

Today in New Orleans almost any conversation will commonly contain a reference either to "before Katrina" or "after Katrina." This is not so much the case in the projects presented here; though some were related to

the disaster, the architecture displays no seismic shift. All of this work points toward the future, one in which contemporary New Orleans is understood to be as vital and worthy of attention as its illustrious past.
